

SOCIAL DISTANCING AI

OVERVIEW

As they look to re-open their facilities, many companies are seeking solutions that can help keep employees and guests safe. Unfortunately, there are few options: Social distancing and fever screening are hard to enforce, and hiring people to enforce social distancing is expensive and can create unpleasant work environments.

That's where Actuate comes in: Actuate's Social Distancing AI platform uses Actuate's industry-leading intruder and people detection system to ensure that building occupants are staying at least 6 feet away from each other, managing occupancy levels and limiting community transmission.

HOW IT WORKS

Social Distancing AI integrates with existing cameras and servers, meaning no new hardware is necessary. The system is completely transparent to building operators and inhabitants.

Alerts of social distancing violations are sent to building staff and includes daily, hourly, or weekly reporting of gathering hotspots, empowering them to educate their employees, send reminders to stay safe, or track compliance over time.

SOFTWARE ONLY

Actuate is software only, enabling fast, inexpensive deployment.

Contrast this to thermal cameras for fever screening are available, but functional hardware costs more than \$10,000 and many offerings are not accurate enough to provide any protection.

RESULT: SAFER FACILITIES

Social Distancing AI helps keep employees, customers, and guests safe more effectively and affordably than other solutions.

Hiring people to enforce social distancing is expensive and can create unpleasant work environments.
